

THE RIVER OAKS

THE RIVER OAKS BUILDING is a shining example of architectural preservation. Originally known as The River Oaks Apartments in the early 1960s, Houston architect Cameron Fairchild was behind the mid-century building's original design. Arel Capital decided to renovate the historic structure, keeping the structurally sound bones as a base while modernizing the design to create fewer residences and creating a more spacious high-end design. Floor-to-ceiling glass and mid-century influences are predominant in the design throughout.

It doesn't get any sexier than the building's mailroom. Design elements like warm walnut and brass flirt with soft white leather curves, turning the mundane task of sorting through mail into a moment to organize the mind.
